Dear Physician

Synergy Group of Canada is a research partner and consultant to the largest ever multi-centric CNS Disorder research effort utilizing a nutritional protocol. Universities involved include U Calgary, Harvard University, U Alberta and U Lethbridge. Dr. Richard Ferre who you will note has collaborated with Dr. Bonnie Kaplan on two presented studies, is Chief of Psychiatric Services at Utah Primary Children's Hospital. Dr. Kaplan is Director of the Behavioural Research Unit, U Calgary, Alberta Children's Hospital

I have attached a complete physician's package, Harvard University's abstract will be available once it has been published. Please feel free to call with any questions, or if you wish to discuss any aspect of the research further. As an interesting note, we have commonly seen the co-morbid conditions of PMS, SAD, Asthma, PPD, Migraine headaches and Irritable bowel/Painful bladder (I/C) normalize as the target CNS disorder normalizes. I have received the funding and am in negotiations with a Children's Hospital to run a formal pilot study into Asthma in children and teens. Unfortunately this treatment protocol has not been shown to have any effect on Alzheimer's or ALS. I look forward to speaking with you.

Yours Truly
